Mac Quickstart Guide

This topic describes how to install Schrödinger's Release 2026-4 software for use on a single Mac machine.

If you run into issues, see Troubleshooting Installation on Mac.

There are four steps to get started using Schrödinger software:

- **Download the software** on the machine you will be using the software.
  - You will need a free Schrödinger account. You can set up an account here with an institutional email. This grants access to software downloads, documentation, training, webinars, and more.
  - You will need a license. If you do not have a license, you can request a trial license here.
- **Install the software**: See below.
- **Configure Licensing**: See Schrödinger Licensing Instructions .
- **Configure Job Settings**: See Running Schrödinger Jobs .

Installing the software

1. Click the disk image (`.dmg`) in your **Downloads** folder.
2. Double-click the installer package (`.pkg`).
3. Follow the prompts in the installer.

4. When prompted, enter the required password to install the software.

   The software is installed in `/opt/schrodinger/suites2026-4`, and a folder named **SchrodingerSuites2026-4** is added to the **Applications** folder.

Checking the installation

1. Double-click the Maestro icon in the **SchrodingerSuites2026-4** folder of your **Applications** folder to start Maestro, to check that Maestro is properly installed and licensed.

Next Step: Install the license
